SITUATION SUMMARY

Oil Sheen, Goleta Beach, Santa Barbara County – Hazardous Material Spill Report # 15-4349

On 07/29/15 at 0900 hours, the Warning Center (WC) completed Spill Report #15-4349, reported by a boat owner offshore of the City of Goleta who reported seeing a half mile sheen. The GPS location the reporting party gave put the boat about a mile offshore of Goleta Beach. The California State Warning Center conducted all appropriate notifications, including but not limited to local government agencies.

- Per Santa Barbara County Fire Department at 1112 hours, they had responded to the original report and found a 40 foot sheen at 1,000 yards off Goleta Pier.
- The WC contacted SURCOM and was told that they had assigned a Warden to the incident. At 1645 hours, the assigned warden advised she will meet with USCG and take samples at the beach. Biologist also on the way. Samples will be taken to a lab in Santa Barbara for analysis. ETR will be longer than a few hours.
- Per US Coast Guard Sector Los Angeles, they called their Marine Safety detachment in Santa Barbara County to advise them of the report. They also checked with all the offshore Platforms who verified that there were no discharges or visible oil in the water.
- Reports from a USCG overflight shows non recoverable oil sheen near platform Holly, which has been shut down for the last month. Since it isn't pumping, seep would increase. USCG will boat out to the sheen just to take samples. Clean up is unlikely.

Per Santa Barbara County OEM at 1640 hours, the slick near Goleta Beach is currently being investigated as an incident separate from Refugio.

- It is described after a USCG overflight as an unrecoverable sheen approximately 3 miles x ½ mile, with 30 percent coverage.
- OSPR and USCG responded to the beach and took samples.
- USCG will also take sheen water samples for comparison.
- There are some tar balls on the east side of the beach, and County Fire is also reporting some tar balls at Hope Ranch.
- The beaches remain open, though beachgoers are advised to avoid oil contact.

Cal OES Duty Officers continue to monitor the situation.

Cal EOC Incident – 2014 Drought

- SOC / Inland REOC remains activated in support of 2014 Drought

Weather of Concern

- Fire Weather is still a concern for northern California through Friday with localized Thunderstorms and Flash Flooding expected for areas of central and southern California through the weekend.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER

WEATHER SYNOPSIS BY REGION:

Northern Region

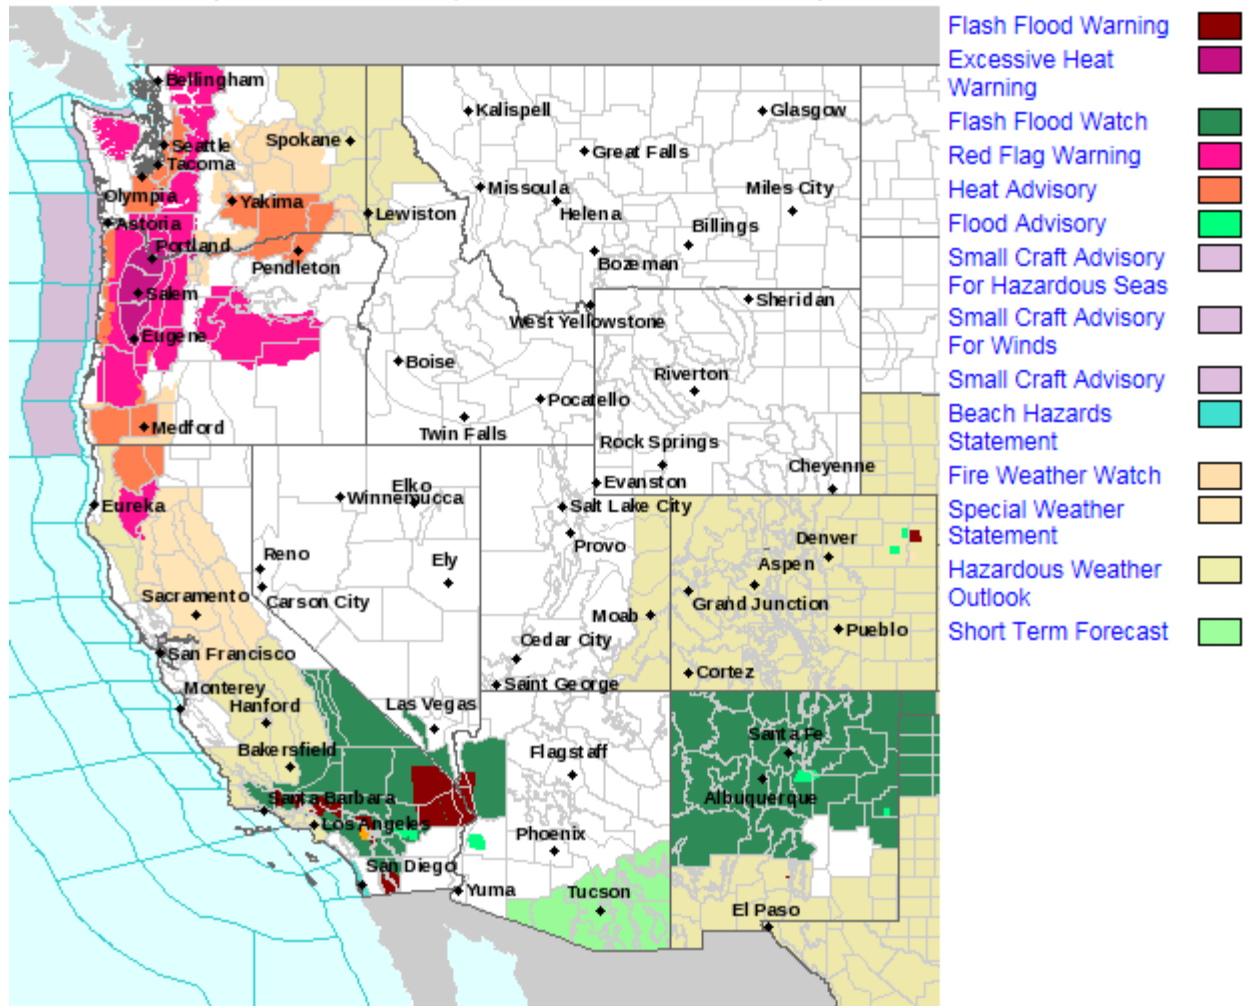

Strong high pressure will still be over the region today and Friday. Today should be the hottest day of the period with the warmest inland areas once again right around 110. Friday will still be very warm, but a cooling trend will begin as the high pressure begins to weaken. Very low afternoon relative humidity and poor to moderate overnight relative humidity recovery will continue as well. As anticipated, monsoon moisture is working its way northward will likely arrive over the far southwest areas of Northern Operations late today. Although afternoon and evening thunderstorms are not expected today, some cumulus build ups seem likely to develop over the western mountains this afternoon. Isolated afternoon and evening thunderstorms will become more widespread Friday and continue through the weekend. Eastern areas north of Tahoe may not have any thunderstorms until Saturday, but confidence in that is not very high yet. A trough will be dropping south out of the Gulf of Alaska over the weekend and conditions will cool down, but things will be quite unstable and daily mountain thunderstorms are expected. Temperatures will cool to seasonal norms or somewhat lower early next week. Afternoon winds will be fairly light in most areas through the 7 day period. However, for the next few days at least, the afternoon Delta breeze will become moderately strong.

Southern Region

A sustained southeasterly flow will continue to pump deep “monsoonal” moisture into the area through the end of the week. The amount of moisture in the atmosphere is running 200-300% of normal this morning, which will translate into scattered wet thunderstorms later this morning and throughout the afternoon. Yesterday, there were over 2,500 lightning discharges over the district, about double that total may occur today. The highest concentration of storms will likely be over the Angeles and San Bernardino National Forest northward into the deserts. Isolated storms may occur as far north as southern Monterey County toward evening. The storms will produce heavy rain, but rapid cell movement to the northwest around 15 mph may limit flooding potential somewhat. Expect high temperatures to be a couple degrees cooler than yesterday due to the cloud cover. Friday, expect slightly fewer storms in Southern California with the greatest number of storms in the Central Sierra. In all, some areas will see over an inch of precipitation today and Friday. However, storm totals will be much more varied than during the last precipitation event. Over the weekend, the flow aloft is expected to turn more southwesterly which should lead to drier and cooler weather. By Sunday, only the Sierras and the highest elevations of Southern California will see storms. Temperatures will return to near normal readings by Monday. It may turn breezy in and near the deserts next week as onshore flow increases.
